Hierarchy of Data Needs

Impact

Are outcomes achieved:

Is the data creating the desired improvement in the business?

1

Reliability

Is the data dependable:

Is data predictable and consistent?

2

3

Primitives

Do you have the essentials:

Did data arrive?
Is it in correct, expected format?

Databand

What is a data SLA?

An agreement defining standards for a data engineering team, laying out how quality is measured, issues triaged, and problems resolved.

Data SLAs provide a framework for measurement to make sure the hierarchy of needs is met:

- **Primitives are good**
- **Reliability is achieved**
- **Impact on the business is seen**

Create trust

Databand

# How to meet data SLAs with Databand

Databand is the missing piece to achieving SLAs
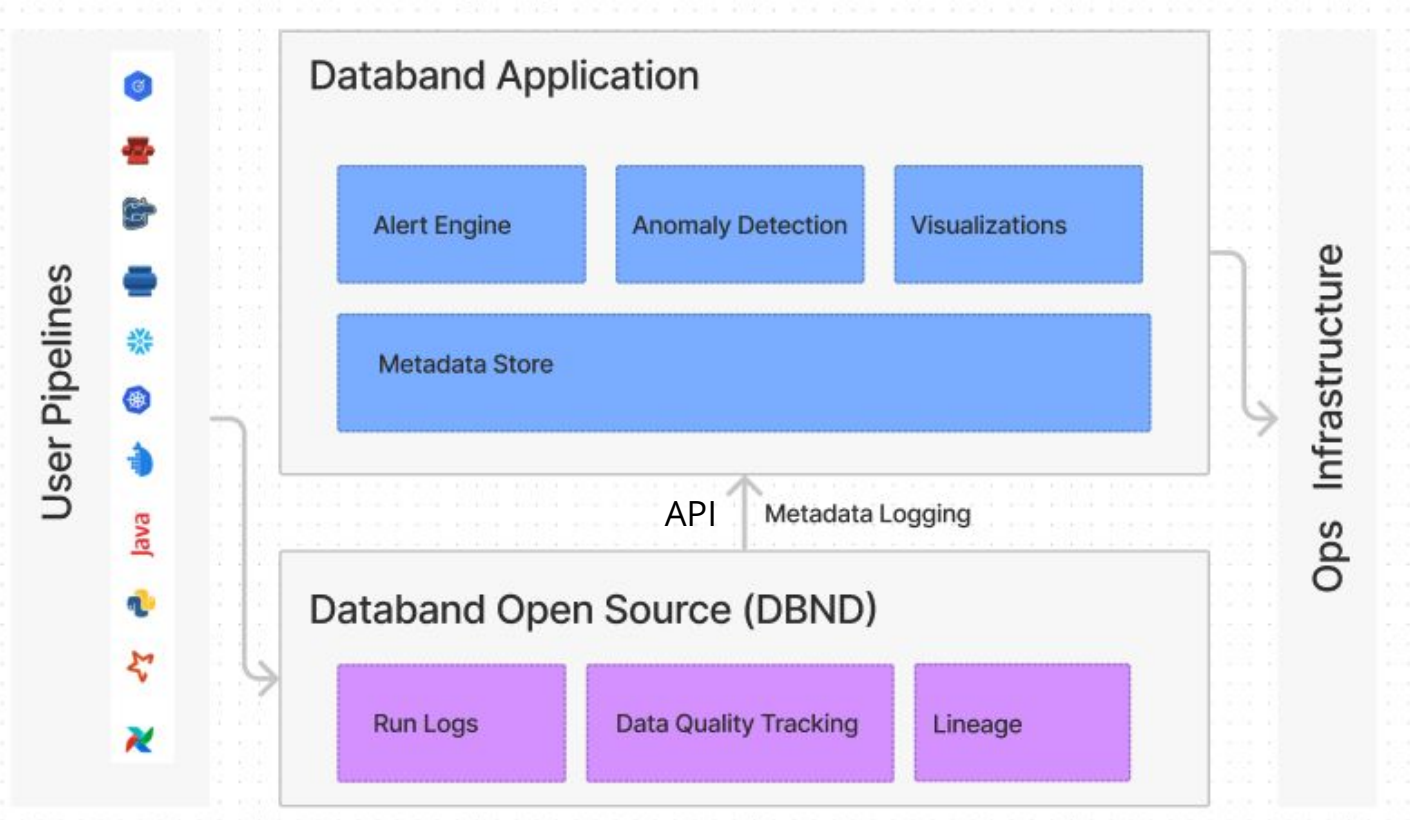

Databand is a data pipeline observability platform

Databand **monitors** pipelines and **alerts** on job execution issues & data quality problems

Providing engineers triage and fast remediation
